REPORT METADATA

Generation Date: 2026-09-29 16:50:23

PROJECT / DATASET

Selected dataset/scene: Test Layer

AREA OF INTEREST

Geometry type: Polygon

NDVI ANALYSIS

Formula: $(\text{NIR} - \text{Red}) / (\text{NIR} + \text{Red})$

Minimum: -1

Maximum: 1

Mean: 0.5

Median: 0.5

Total pixels: 100

Valid pixels: 100

No-data pixels: 0

Source CRS: N/A

Display CRS: N/A

Resolution: N/A

NDVI COLOR INTERPRETATION

Negative / very low NDVI (< 0.0): Water, shadows, clouds, or non-vegetated surfaces.

Low NDVI (0.0 to 0.3): Bare soil, built-up surfaces, roads, or sparse vegetation.

Moderate NDVI (0.3 to 0.6): Moderate vegetation or partially vegetated areas.

High NDVI (> 0.6): Dense and healthy vegetation.

AOI NDVI INTERPRETATION

The selected AOI has a mean NDVI of 0.500, which suggests that healthy vegetation is prominent across the AOI. NDVI values range from -1.000 to 1.000, showing that the area contains a mixture of low/non-vegetated surfaces and portions with moderate to dense vegetation.
